Tradebilia Category / Item-Type Filter Reference

Prepared: October 30, 2026
Scope: Marketplace and eBay comparison pipeline
Purpose: Permanent reference for the identity filters, ranking models, visual-review caps, and intentional exceptions used by the Tradebilia analyzer.

> This document describes the current implemented behavior. It is not a recommendation list or a promise that missing provider data will be filled in. When a provider does not supply a field, the field remains **unknown** and does not automatically exclude the candidate.

---

1. Universal rules applied before category-specific rules

These rules apply to every marketplace/eBay visual-source candidate before the category/item-type logic runs.

Universal rule	Behavior
Collection/Lot	Always non-comparable. No provider lookup, ranking, visual review, or trade analysis is allowed. The UI must state that the item is not comparable.
Raw vs. graded/certified	An explicit raw-versus-graded contradiction is held out of visual review. Ordinary condition differences are not automatically treated as identity mismatches.
Grading company	If the target is graded/certified, a different explicitly declared grading company is held as context-only. Video Games preserve the approved PSA↔WATA equivalence.
Numeric grade	If the target has an explicit grade, a different explicit grade is held as context-only. Missing grade data remains unknown.
Unique certificate/holder IDs	Certificate numbers, serials, QR codes, barcodes, and holder tracking IDs identify an individual specimen and are ignored as identity requirements.
Quantity	A candidate explicitly declaring multiple items is not comparable to a target quantity of one.
Duplicate provider record	Duplicate provider references are retained as context-only and are not sent to visual review twice.
Explicit contradiction	A declared contradiction is retained as context evidence and is not sent to the initial visual queue. Ambiguous or missing data is not treated as a contradiction.
Source boundary	These marketplace/eBay filters, scores, and caps do not control grading or reference applications. Those sources keep their separate role and contract.
Cap overflow	Candidates outside an item type’s visual cap remain visible with their score/rank as context-only evidence; they are not silently deleted.

2. Ranking and cap conventions

Standard visual-review cap

The standard cap is based on the highest ranked candidate score for the target item type:

Score	Maximum candidates sent to visual review
90–100	8
80–89	6
70–79	4
60–69	2
Below 60	0

A candidate’s score is the sum of the applicable fields it matches. Unknown fields do not add points and do not subtract points.

Item-specific cap exceptions

Item type	Cap bands
Comics / Single Comic	90–100: 10; 80–89: 8; 70–79: 6; 60–69: 4; 50–59: 2; below 50: 0
Sports Cards / Single Card	90–100: 10; 80–89: 8; 70–79: 6; 60–69: 4; 50–59: 2; below 50: 0
Sports Cards / Set	85–100: 10; 70–84: 6; 60–69: 3; 50–59: 2; below 50: 0
Sports Cards / Unopened Product	90–100: 10; 75–89: 6; 65–74: 3; 55–64: 2; below 55: 0
Comics / Original Art	No visual cap; market-range context only
Autographs / Signed Item	No visual cap; market-range context only

3. Category and item-type details

Comics

Single Comic

Identity filter fields: comic title/series, issue number, grade, grading company, variant/cover description, publisher, publication year, Direct versus Newsstand distribution, original versus facsimile/reprint, and signed status. An individual comic is also protected from obvious non-single forms such as lots, collections, or sets.

Important rules: ordinary title wording differences are tolerated; explicit issue-number conflicts, distribution conflicts, facsimile/reprint conflicts, and graded/raw conflicts are held before visual review. Grading company and grade are scored separately. Unique certification IDs are ignored.

100-point ranking model: comic title 20; issue number 20; grade 15; grading company 10; variant 10; publisher 10; publication year 5; distribution type 5; facsimile/original 3; signed status 2.

Visual cap: 10 / 8 / 6 / 4 / 2 / 0 at score bands 90 / 80 / 70 / 60 / 50.

Original Art

Identity/context fields: artist name, artwork title or character, art type, comic title/series, issue number, and publisher. Cover-sketch art uses the separate comic title and issue fields.

Workflow: this is not an exact visual-comparison item. Listings are ranked for market relevance and used to estimate a general market range. They are not sent to visual AI because different original artworks are not expected to be physically identical.

100-point market-relevance model: artist 30; artwork title/character 20; art type 20; comic title 15; issue number 10; publisher 5.

Visual cap: none. The output is market context only.

Collection/Lot

Not comparable. No lookup, ranking, visual review, or trade analysis.

Sports Cards

Single Card

Identity filter fields: single-card form, player/athlete, year, manufacturer or set, card number, grading company, numeric grade, rookie status, autograph status, relic/memorabilia status, and serial-numbered status. Explicit sets, lots, collections, and multi-card listings are held out.

100-point ranking model: player 20; year 15; manufacturer/set 15; card number 15; grading company 10; grade 10; single-card form 5; rookie status 3; autograph status 3; relic status 2; serial-numbered status 2.

Visual cap: 10 / 8 / 6 / 4 / 2 / 0 at score bands 90 / 80 / 70 / 60 / 50.

Set

Identity filter fields: set identity, year, manufacturer, set type, complete versus partial/missing cards, factory-sealed status, sport, and set form. Explicit individual cards are excluded as mismatches. Ambiguous titles that merely say “cards” are not automatically excluded.

100-point ranking model: set name 25; year 15; manufacturer 15; set type 15; missing cards/completeness 15; factory sealed 10; sport 5.

Visual cap: 10 at 85–100; 6 at 70–84; 3 at 60–69; 2 at 50–59; 0 below 50.

Unopened Product

Identity filter fields: product name, product format (pack, rack pack, box, case), product type (hobby, jumbo, retail, blaster, mega, hanger, cello, rack), manufacturer/set, year, sealed/opened status, authentication status, authentication company, and From a Sealed Case (FASC) status. Explicit individual cards, sets, collections, and lots are excluded.

Hard conflict examples: a target authenticated by BBCE cannot be matched to an explicitly different authentication company; a target that is BBCE and FASC cannot be matched to a candidate that explicitly lacks BBCE or FASC; factory-sealed and opened/unsealed states conflict.

100-point ranking model: product name 20; product format 20; product type 15; manufacturer/set 15; year 10; authentication company 10; factory sealed 5; FASC 5.

Visual cap: 10 at 90–100; 6 at 75–89; 3 at 65–74; 2 at 55–64; 0 below 55.

Collection/Lot

Not comparable. No lookup, ranking, visual review, or trade analysis.

Vintage Toys

All eight comparable Vintage Toys item types use an item-type identity gate first, then their own field-weighted 100-point model and the standard 8 / 6 / 4 / 2 / 0 cap.

Item type	Identity filter fields	Ranking weights
Action Figure/Doll	Toy name/character, brand, franchise, year, packaging type, completeness, accessories	Toy name/character 30; brand 15; franchise 15; year 10; packaging 10; complete 10; accessories 10
Board Game/Puzzle	Game/puzzle name, publisher/brand, year, completeness, instructions, box	Game/puzzle name 30; publisher/brand 15; complete 15; year 10; pieces 10; instructions 10; box 10
Electronic Toy	Toy name, brand, year, tested status, working condition, battery compartment, sound/lights	Toy name 30; brand 15; tested 15; working condition 15; year 10; battery compartment 10; sound/lights 5
LEGO	Set number, theme, completeness, packaging type, release year, piece count, minifigures, retired status	Set number 30; theme 20; complete 15; packaging 10; release year 10; piece count 5; minifigures 5; retired 5
Model/Kit	Model/kit name, brand, scale, built/unbuilt state, completeness, instructions, year	Model/kit name 30; brand 15; scale 15; built/unbuilt 15; complete 10; instructions 10; year 5
Playset	Playset name, brand, franchise, year, completeness, missing pieces, original box	Playset name 30; brand 15; complete 15; franchise 15; year 10; missing pieces 10; original box 5
Plush/Stuffed Toy	Toy name/character, brand, franchise, year, tags attached, cleanliness/odor notes	Toy name/character 35; brand 20; tags 15; franchise 10; year 10; cleanliness/odor 10
Vehicle	Vehicle name, brand, franchise, year, vehicle type, packaging type, working features	Vehicle name 30; brand 15; vehicle type 15; franchise 10; year 10; packaging 10; working features 10

Additional rule: explicit candidate item types that differ from the target are held context-only. Explicit complete/incomplete, missing-piece, opened/sealed, tested/untested, or working/not-

working contradictions are retained outside the visual queue. Subjective general condition differences are not automatically hard exclusions.

Collection/Lot

Not comparable. No lookup, ranking, visual review, or trade analysis.

Video Games

Game

Identity filter fields: game title, platform, release year, region, edition, product form, UPC/EAN, and explicit working condition. Product form includes sealed, CIB, boxed, loose, and related label states.

100-point ranking model: game title 30; platform 20; release year 15; region 10; edition 10; product form 10; UPC/EAN 5.

Visual cap: standard 8 / 6 / 4 / 2 / 0.

Console

Identity filter fields: console name, model number, region, working condition, original box, cables, and controllers.

100-point ranking model: console name 30; model number 20; region 15; working condition 15; original box 10; cables 5; controllers 5.

Visual cap: standard 8 / 6 / 4 / 2 / 0.

Accessory

Identity filter fields: accessory type, accessory name, compatible platform, manufacturer, working condition, and original packaging.

100-point ranking model: accessory type 25; accessory name 25; compatible platform 20; manufacturer 10; working condition 10; original packaging 10.

Visual cap: standard 8 / 6 / 4 / 2 / 0.

Special grading rule: the approved PSA↔WATA equivalence is retained for Video Games; other explicit grading-company conflicts remain protected by the universal rules.

Collection/Lot

Not comparable. No lookup, ranking, visual review, or trade analysis.

Stamps

Single Stamp

Identity filter fields: Scott/catalog number, country, year, denomination, stamp format, mint/used status, hinge/gum status, perforation, watermark, and overprint/surcharge.

100-point ranking model: Scott number 25; country 15; year 15; denomination 10; format 10; mint/used 10; hinge/gum 5; perforation 5; watermark 3; overprint/surcharge 2.

Visual cap: standard 8 / 6 / 4 / 2 / 0.

Stamp Set/Sheet

Identity filter fields: set name/description, country, year, sheet/set type, number of stamps, mint/used status, grade, grading company, and format. Individual stamps are not treated as equivalent to a set or sheet.

100-point ranking model: set name 25; country 15; year 15; sheet type 15; number of stamps 10; mint/used 8; grade 5; grading company 4; format 3.

Visual cap: standard 8 / 6 / 4 / 2 / 0.

Collection/Lot

Not comparable. No lookup, ranking, visual review, or trade analysis.

Coins

Single Coin

Identity filter fields: country/issuing authority, year/date, denomination, mint mark, composition/metal, strike/finish/designation, variety, original versus replica/restrike status, grading company, and numeric grade when applicable.

100-point ranking model: coin title/series/type 20; year/date 15; denomination 15; mint mark 10; variety 10; numeric grade 12; grading company 8; designation/strike/finish 5; composition/metal 3; country/issuer 2.

Visual cap: standard 8 / 6 / 4 / 2 / 0.

Special rule: unique certificate IDs are ignored. Explicit replica, counterfeit, facsimile, or restrike contradictions are held context-only when the target declares an original/authentic item.

Coin Set

Identity filter fields: set name/series, year/date, country/issuing authority, set type, number of coins, original packaging, and set-versus-individual form. An explicit single coin is excluded from a set target.

100-point ranking model: set name/series 25; year/date 20; country/issuer 15; set type 15; number of coins 15; original packaging 10.

Visual cap: standard 8 / 6 / 4 / 2 / 0.

Paper Money/Banknotes

Identity filter fields: country/issuing authority, denomination, year/date, note type/series/design/subject, numeric grade, grading company, signature status, and condition context.

100-point ranking model: country 20; denomination 20; year/date 15; title/series 15; numeric grade 12; grading company 8; signature 5; condition 5.

Visual cap: standard 8 / 6 / 4 / 2 / 0.

Collection/Lot

Not comparable. No lookup, ranking, visual review, or trade analysis.

Pokémon

Single Card

Identity filter fields: card name, set, card number, language, finish, Card Type / Mechanic, rarity, and edition/era. Card Type / Mechanic and Finish are separate fields. Explicit sets, unopened products, collections, lots, bundles, and mixed groups are held out when declared.

100-point ranking model: card name 25; set name 20; card number 15; language 10; finish 10; Card Type / Mechanic 10; rarity 5; edition/era 5.

Visual cap: standard 8 / 6 / 4 / 2 / 0.

Set

Identity filter fields: set name, language, set type/status (complete, master, partial, incomplete), card count, year, and packaging. An explicit individual card is not comparable to a set.

100-point ranking model: set name 35; set type 20; language 15; card count 15; year 10; packaging 5.

Visual cap: standard 8 / 6 / 4 / 2 / 0.

Unopened Product

Identity filter fields: product name, set, product type/configuration, language, release year, factory-sealed status, authentication status/company, and FASC/from a sealed case. Explicit single cards, sets, collections, lots, or mixed groups are held out.

100-point ranking model: product name 20; set name 20; product type 20; language 10; year 10; factory sealed 10; authentication 5; FASC 5.

Visual cap: standard 8 / 6 / 4 / 2 / 0.

Collection/Lot

Not comparable. No lookup, ranking, visual review, or trade analysis.

Movies

Individual Movie

Identity filter fields: movie title, format, release year, edition, region/region code, and sealed/opened status. Explicit box sets, series, collections, or lots are excluded.

100-point ranking model: movie title 30; format 20; release year 15; edition 15; region 10; sealed status 10.

Visual cap: standard 8 / 6 / 4 / 2 / 0.

Box Set

Identity filter fields: box-set/series name, format, edition, movie count, and sealed/opened status. An explicit individual movie is not comparable to a box set.

100-point ranking model: box-set name 30; format 20; movie count 15; edition 15; sealed status 10; grading details 10.

Visual cap: standard 8 / 6 / 4 / 2 / 0.

Collection/Lot

Not comparable. No lookup, ranking, visual review, or trade analysis.

Music

Vinyl Record, Cassette Tape, Compact Disc, 8-Track Tape, and Other Music Format

All five Music formats share the same 100-point model, but the format identity gate is format-specific.

Identity filter fields: exact media format, artist/performer, release/album title, record label, catalog number, country/pressing country, release year, edition/variant, pressing/matrix details, and packaging context. A candidate with an explicitly different format is held out.

Condition safeguards: factory sealed/new sealed versus opened is a material conflict. For Parts/Parts Only versus a normal item is a material conflict. Subjective condition labels such as Good, Very Good, Excellent, and Fair remain visual/context evidence rather than automatic hard exclusions.

100-point ranking model: artist 25; release title 20; format 15; record label 10; catalog number 10; release year 8; country 5; edition 5; packaging included 2.

Visual cap: standard 8 / 6 / 4 / 2 / 0.

Item-specific interpretation:

- Vinyl Record: vinyl/LP/EP/45/pressing details must agree.
- Cassette Tape: cassette/audio-tape format must agree.
- Compact Disc: CD/compact-disc format must agree.
- 8-Track Tape: eight-track/8-track format must agree.
- Other Music Format: explicit non-listed format is preserved as its own context; a known conflicting format is still held out.

> Music has no Collection/Lot layout in the current registry, but the universal Collection/Lot block still applies if a Collection/Lot value is received.

Autographs

Signed Item

Identity filter fields: signer, signed item type, autograph category, authentication company, inscription/personalization, and signed status where available.

100-point market-relevance model: signer 35; signed item type 25; autograph category 10; authentication company 20; inscription 10.

Workflow: signed pucks, balls, photos, jerseys, helmets, books, and similar items are not expected to be physically identical. Results are used to establish a market range for similar signed items, not to claim an exact visual match.

Visual cap: none. Candidates are ranked market context only and do not enter visual AI.

Collection/Lot

Not comparable. No lookup, ranking, visual review, or trade analysis.

Disney Pins

Individual Pin

Identity filter fields: pin name, character, series, year, pin-trading event, limited/open-edition status, artist proof, pre-production status, and backstamp information. Disney Pins are not treated as graded collectibles in this workflow; stale grading fields do not create mismatches.

100-point ranking model: pin name 25; character 15; series 15; year 10; pin-trading event 10; limited edition 10; open edition 5; artist proof 4; pre-production 3; backstamp 3.

Visual cap: standard 8 / 6 / 4 / 2 / 0.

Pin Set

Identity filter fields: set name, complete/incomplete status, number of pins, series, included characters, limited-edition status, and missing pins. Individual pins are not comparable to a pin set.

100-point ranking model: set name 25; complete set 20; number of pins 15; series 15; characters included 10; limited edition 10; missing pins 5.

Visual cap: standard 8 / 6 / 4 / 2 / 0.

Collection/Lot

Not comparable. No lookup, ranking, visual review, or trade analysis.

---

4. Operational behavior

1. Normalize provider fields first.
2. Apply universal safeguards.
3. Apply the category and item-type identity filter.
4. Rank remaining candidates using the item-type score.
5. Apply the applicable visual cap, if the item type uses visual review.
6. Send only the selected marketplace/eBay candidates to visual review.
7. Preserve filtered, capped, image-less, or low-score candidates as context-only evidence with their reason and score.
8. For Original Art and Signed Item, skip visual review and return ranked market-range evidence with price metrics.
9. Never run provider lookups or trade analysis for Collection/Lot.

5. Documented implementation status

Coverage	Result
Categories	11
Item types reviewed	44
Comparable item types	34
Comparable types with specific filters	34 / 34
Comparable types with ranking models	34 / 34
Comparable types with visual caps	32 / 34
Intentional market-range exceptions	2
Collection/Lot exceptions	10
Confirmed analyzer gaps	0

The two comparable types without visual caps are **Comics / Original Art** and **Autographs / Signed Item**. They are intentionally market-range workflows, not visual-match workflows. All Collection/Lot types are intentionally excluded from the analyzer.

Validation record at time of documentation: focused visual-filter suite passed $^{173}/_{173}$; TypeScript passed; prior full deterministic suite passed 1,877 tests with 7 skipped; no database, migration, credential, provider, deployment, or publishing changes were made for this documentation.
